

# Analysis & Comparison of Art Gallery Website

## AI Prompt

Design me a same page according to your imagination, make 2 new files one.html and one .css no more than that and then make a page, use the same idea but extremely better. I need it to be pretty advanced meaning it should have many functionalities

The art gallery must consist of these sections:  
A welcome section, About us, Art gallery with 3 images (you can use online images), then Feedback and then Sign in Sign out. All of these should be in a single page by using the above task.  
Use as much as creativity as you can add and make it look extremely good, but no more than one html and one css files, you can use any concept if you want

## Analysis:

The AI-generated art gallery website is better because it provides advanced functionality, interactivity, and a professional user experience. It includes features such as filtering, searching, lightbox viewing, responsiveness, and accessibility support, which are missing in my version. While my website fulfills the basic requirements using HTML and CSS, the AI version demonstrates modern web development practices. Therefore, the AI website is more scalable, user-friendly, and closer to real-world web applications.
